Note! There is a crack available that allows you to edit most of the tools without a floating license. Here's a link to it: <http://www.softasm.com/files/3494201/PhotoScan+1+5+3+Crack.html> [Softasm] Download from Google Drive [<https://drive.google.com/file/d/0B6r4NWpUx1u3c2NbUFRQUdZnKE/view>] Another crack with the same result here, but this time it's not free. After downloading, click on 'Run' in the top left corner of the program. Follow the steps instructed by PhotoScan. Uncheck all options that you do not want to use. All other options can be left checked or unchecked depending on your need for them or personal preference (a lot of people would like to see more measurements). Once you are finished, click 'Finish'. At this point you should see a window pop up. You should see something like this: Double click the 'File' tab and scroll down until you get to the 'Tools' tab. Here, make sure 'Measure 3D projects' is selected (I would suggest selecting everything to include all project types), and click OK. You will then be prompted that you wish to install these tools. Click OK and wait for it to finish installing. Once complete, go back into the program and start a new project by clicking Create Project in the toolbox menu (the box displayed at the top left of your screen). Select 'PhotoScan > File 2D 2D Measurement'.
